(GLOBAL)

MOBILE FIRST

The ASAP platform is a cloud based facility management portal for societies and apartments alike that helps a society manage resident (owners & tenants) data, payables, receivables, vendors along with their AMCs, society tasks, committee members & communications in an online secure manner.

OS: Android, Swift, React Native

Domain: Housing

The ASAP app enables one to view payment summary for his/her unit/flat. Elected members can use the app to authorize vouchers issued toward vendor services to be availed by the property.

Key Services and Technologies delivered:

Android

- REST API calls to send and receive data from server.
- Dynamic component reusability through Fragment
- Implicit Intent for integrating file explorer into the app.
- PDF Viewer

Swift

- NSJSON Serialization to fetch data from server.
- Delegate for sound reusable design pattern implementation.

React Native

- REST API calls to send and receive data from server.
- RNFS Manager to download a PDF file.
- PDF Viewer
